AC599 is a compact 2-way full-range loudspeaker system comprised of one 384 mm ( 15 in ) low frequency driver and one 25 mm ( 1 in ) exit/35 $\mathrm{mm}(1.5 \mathrm{in})$ voice-coil compression driver. The horn provides $90^{\circ}$ by $90^{\circ}$ coverage in vertical and horizontal orientation. High-slope passive crossovers minimize band overlap and well-controlled offaxis response.

The cabinet is fitted with M10 threaded suspension points. Four threaded inserts located on back of the enclosure allow attachment of a MultiMount or similar type mounting.

AC599 is part of JBL's AE Application Engineered Series, a versatile family of loudspeakers for a wide variety of fixed installation applications.

## 1 Full space ( $4 \pi$ ) conditions

2 Calculated maximum SPL based on rated power handling
3. IEC shaped pink noise with 6 dB CF for 100 hrs

4 AES standard, one decade pink noise with 6 dB crest factor within device's operational band, free air. Standard AES 2 hr rating plus long-term 100 hr rating are specified for low-frequency transducers.

JBL continually engages in research related to product improvement. Some materials, production methods and design refinements are introduced into existing products without notice as a routine expression of that philosophy. For this reason, any current JBL product may differ in some respect from its published description, but will always equal or exceed the original design specifications unless otherwise stated.
