

# INTRODUCTION TO THE VRX-SMAF

The VRX-SMAF is an array frame designed to be used for suspension of the VRX928LA and VRX915S loudspeaker systems. The optional array frame kit includes the following items:

- 1 x frame
- 2 x quick release pins
- 2 x drop levers
- 2 x 3/8" shackles

## WORKING LOAD LIMIT

The working load limit depends upon the configuration of array frame and speakers being suspended. Please refer to the "DEPLOYING THE SYSTEM" section of this user guide for maximum allowable load limits when using the VRX-SMAF frame.

The VRX-SMAF array frame has been specifically designed to work only with the VRX928LA and VRX915S speakers. Use of the array frames in any manner other than as described in this manual could result in damage to the frame and pose a risk of injury or death.
