## A2WS -- Windscreen

---

### General Description

**Use the Shure Model A2WS Windscreens to attenuate unwanted breath and wind noise in close talk and outdoor applications. It prevents annoying pops and ticks when a talker or performer speaks or sings closely into the microphone and shields the microphone from rushing and whistling sounds in adverse wind conditions.**

**Effective and rugged, the A2WS fastens securely to both hand-held and stand-mounted SM57 and 545 Series microphones. It is available in gray (A2WS-GRA) and black (A2WS-BLK).**

---

### Installation

1. Slip the windscreen over the microphone until the inside of the windscreen barely makes contact.
2. Move the windscreen 3 to 6 mm (1/8 to 1/4 in.) away from the microphone top.
3. Tighten the setscrew to securely fasten the windscreen.  
Note that the setscrew connects to the bushing rather than the microphone body.
